

Docuflo[®] Blockchain API

Challenges in Document Forgery Detection

Complex forgery detection

Differentiating forgery and clarity modification

Expensive document verification solutions

Large variety of digital documents

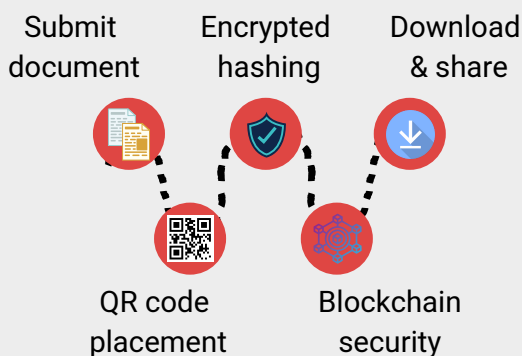

Do You Know?

- Check frauds costs banks about \$900M per year with 22% of all fraudulent checks attributed to signature fraud.
- Companies in the US have lost \$500B due to fraud.
- Data breaches exposed 4.1B records in the first half of 2019.

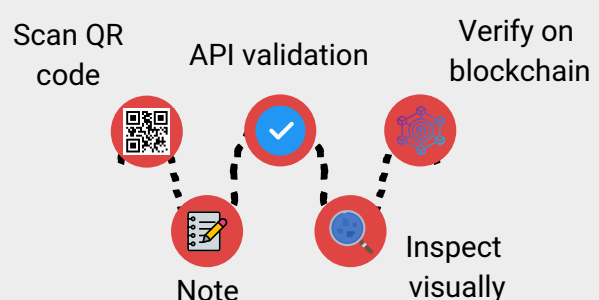

Docuflo Blockchain API removes the bottleneck in fraud prevention by eliminating the need for third party verification and solves document forgery issues with:

- Very high level of security - built on patented blockchain and QR code security technology
- Builds trust - users can compare the document under inspection with the original themselves
- Efficient - secure and share documents in real time
- Easy to understand - simple user interface and authentication process
- Highly competitive price and value for money

Secure & Share

Verify & Validate
